INTERNETWORKING USING CISCO PACKET TRACER

AIM :-

To design & configure an internetwork using a router, wireless router, DHCP server & Internet cloud in Cisco Packet Tracer.

REQUIREMENTS :-

- ⇒ Cisco Packet Tracer
- ⇒ Router
- ⇒ PCs
- ⇒ Wireless Router
- ⇒ Laptop
- ⇒ Cable modem
- ⇒ Internet cloud
- ⇒ Server
- ⇒ Ethernet cables.

PROCEDURE :-

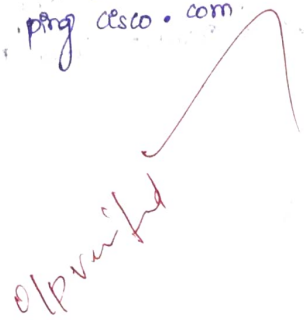

1) Create required network topology in Cisco Packet Tracer.
2) Connect PCs to the router & configure the router interfaces.
3) Assign IP addresses & default gateways to the PCs.
4) Enable router interfaces using no shutdown.
5) Configure the wireless router with SSID home network.
6) Enable DHCP & connect the laptop wirelessly.
7) Configure the server for DHCP & DNS.
8) Test connectivity using ping.

Verification :-

ipconfig /release

ipconfig / renew

ping cisco.com

PROGRAM :-

Router configuration :-

```
enable
config t
interface fa 0/0
ip address 192.168.10.1 255.255.255.0
no shutdown
interface fa 0/1
ip address 192.168.20.1 255.255.255.0
no shutdown
```

IP configuration :-

Device	IP Address	Gateway
PC0	192.168.10.2	192.168.10.1
PC1	192.168.20.2	192.168.20.1

RESULT :-

Thus, the internetwork was successfully designed & configured & connectivity b/w the devices was verified successfully.
