NMAP TO DISCOVER LIVE HOST USING ARP AND ICMP, TCP / UDP PING SCAN IN TRY HACK ME ALGORITHM.

AIM :-

To learn how to use Nmap on the TryHackMe platform to discover live hosts on a network using different host delivery techniques including ARP scan, ICMP scan.

PROCEDURE :-

1) Start the tryHackMe Machine
2) Identify the target IP Address
3) Perform an ARP scan
4) Perform a TCP ping scan
5) Perform a UDP ping scan
6) Record the results.

Configure Routes

open Routes → CLI & Enter enable

configure Terminal

interface gigabit ethernet 0/1

ip address 200.1.1.1 255.255.255.0

ip not outside

no shutdown

exit

Configure static NAT

ip nat inside source static 192.168.110 to 200.1.1.10

Configure Dynamic NAT

ip nat pool my pool 200.1.1.20.200.1.1 network 255.255.255.0

255 ip nat inside source list pool my pool

TEST NAT:

from PC1 open command prompt & type ping 200.1.1.2.

RESULT :-

Thus, the NAT was succesfully configured & Private IP address were translated to public ip address.
